

Sehstedter

Anti-Mould Paint

Activity:

The effect of the paint is based on a process of crystallization, destroying the cells of the organisms (mould, mildew, algae, etc.)

Simply paint over the infestation with Sehstedter Anti-Mould-Paint.

Mould inside the house is not only ugly but dangerous as well. Its spores may irritate the mucous membranes and produce allergies. Its toxin may damage one's body and even produce cancer. Therefore beware of musty smell, water stains and moist windows. Their cause has to be found and removed.

Sehstedter Anti-Mould-Paint can be painted over by all the other Sehstedter wallpaints.

Ingredients:

Cellulose, silica, silicic acid, sodium chloride, vegetal oils, lime, water.

White wall and ceiling paint suitable for an anti-allergic paint coat inside the house. It destroys mould, bacteria and viruses physically. An anti-mould paint ready for use, free from solvents, based on mineral and vegetal ingredients. Its painting coat is active against algae, mould and mildew on the wall and it prevents from further mould development. Highly breathable, with good coverage quality, uninflamable and neutral with regard to allergies. Toxicologically absolutely safe for humans and bees and free from fungicides. As a final coat the paint is neither chafe- nor washproof. It produces a natural, silky surface.

Art.Nr.:25800001.0

1.0l

Directions for use and coverage:

A coat painted with Anti-Mould-Paint indicates moist parts on the wall or ceiling reliably, as it will not cover them but remain transparent. With continuing moisture these parts will remain transparent. The paint can be applied by brush or roller. To obtain a beautiful old-white or pastel colored wall surface 10.0 l are needed for 50-60 m² for two coats diluted by 10-15% with water. The paint can also be used undiluted.

Storage:

Kept in a cool place and protected against frost, stability for approx. 12 months.
