

## **FERTAN - rust converter**

*FERTAN* removes rust without sandblasting!

*FERTAN* is a dark liquid with typically aromatic scent, slightly acidic.

Fertan is non toxic, has no irritating effect on humans and does not pollute the environment. Contact with skin requires simply washing off under running water.

Do not drink! Can be kept for a practically unlimited period of time when container is kept closed. First remove with brush, raw cloth, strong jet of water or the like all loose rust, fat, oil, or soil. Then apply *FERTAN* with brush, roller, sponge or suitable spraying pistol (or bottle). After approx. 1 hour moisten the treated surface. Not necessary when already moist as with cavities and hollow spaces. Now let *FERTAN* work in for at least 24 hours., at temperatures below 12°C 48 hours. Do not use under 0°C. Before any subsequent treatment always sprinkle the surface with water or wipe away the black dust that has been produced by the conversion of rust with a wet cloth. The iron or metal having been treated this way can be painted within days or up to 6 months.

1,0Ltr *FERTAN* is sufficient for a surface of approx 15 squaremetres. On bright surfaces *FERTAN* can produce stains. Therefore cover undergrounds and wash immediately splashes away with water
