

Sehestedt's Casein Binder Paint

is a washable, matte wall paint for interior use with good filling and covering quality. It is white despite its low content of titan dioxide. Its agreeable old white color is produced with a well balanced blend of Dolomite rock powder, talcum, China clay and white chalk. The wall paint is particularly breathable due to its content of beechwoold meal. It is easy to apply, has an anti-static effect, i.e. dust build-up is reduced in living areas. It is overpaintable without any problem, has good coverage quality on all solid surfaces and very good gas permeability. It can be mixed in any ratio with non-fading soil or mineral pigments as very little titan dioxide white must be blended in.

Ingredients in decreasing concentration: water, dolomite rock powder, talcum, China clay, chalk, beechwood meal, casein (from New Zealand), beeswax and shellac soap, borax, castor oil, dammar, chitosan, a little titan dioxide.

Application and coverage: apply two undiluted coats with brush or roller at an interval of 12 hours to produce an old-white or pastel colored wall surface.

1.0 l/10m² / coat

Storage: Store in a cool dry place. Protect from freezing. Unopened containers can be kept for up to 6 months.
