

Sehestedt's White Varnish

A linseed oil standoil varnish with good coverage quality for exterior application as doors, windows, garden furniture for a water resistant, satiny gloss finish. Its high elasticity prevents hairline cracks and brittleness. Dry to the touch, application of a second coat is possible within one workday.

Varnish A white varnish with uncomplicated and economical application as it used to be known by former experts.

Ingredients: lacquer linseed oil, linseed oil and wood oil standoil, copal cooking, talcum, Dolomite rock meal, bentonite, titan dioxide, isoaliphate, pine oil and a blend of the dry substances calcium and cobalt/zirconium.

Standoil is the term for a fat oil, as linseed oil or wood oil, having been heated for some time to approx. 200-300°C to improve its technical qualities.

Coating format: as described with Pre-Varnish

Coverage: approx. 0.75 l/10m² per coat. For the above mentioned three coats a 2.5 l container is necessary for a surface of approx. 10m².

For a matte finish: as all real linseed oil/standoil varnishes Sehestedt's White Varnish will gradually turn matte. Therefore no matt agents should be added. For a silky matt finish on interior surfaces a blend of Pre-Varnish and some White Varnish can be applied.
